

# STABILIZE

Information Security  
solutions that protect  
your business

We deliver Information Security solutions that **stabilize** your organization — helping you build a strong foundation to prevent potential security breaches.

At Pearl Technology, we integrate security into every service we provide, helping you find a comfortable balance between protection and productivity. We train your team to recognize risks, test their understanding, then train again — making your employees your best defense against security breaches. Our customized solutions are designed to protect your organization, ensure compliance, mitigate risk and improve your overall business.

---

---

Just like every service Pearl Technology provides, our security solutions are designed with your business goals in mind. We want to make sure you understand how a security solution — or the lack thereof — can affect your organization. It's essential that you have controls in place to ensure confidentiality. At the same time, you need to protect the integrity and availability of the people, processes and technologies that make it possible for your business to run efficiently.

We'll act as your Chief Information Security Officer, identifying and implementing the security solutions that will have the greatest positive impact on the success of your organization.

### **Our Certifications**

- CISM – Certified Information Security Manager
- CISSP – Certified Information Systems Security Professional
- CEH – Certified Ethical Hacker
- CHFI – Computer Hacking Forensic Investigator
- Security+

# INFORMATION SECURITY SOLUTIONS

## SECURITY CERTIFICATION PROGRAM

Every organization needs to achieve a level of information security, but that level is different for everyone. So we developed a security certification program that starts with small steps and gradually moves you through three levels as your organization matures.

### Level 1: Information Security Training and Awareness – Class

A single click by a user who doesn't understand the impact of his actions can make even the most secure system vulnerable to attack. This one-hour program can have more impact than \$1 million worth of security equipment. The class covers the basics of information security, from general terminology to industry-specific information; mobile device, web browsing and email threats; and incident and response procedures. Participants receive a certificate of completion.

### Level 2: Information Security Training and Awareness – Program

This training and awareness program includes all the topics covered in Level 1, plus “train, test and train” activities to measure knowledge. Participants are subjected to a social engineering (phishing) activity, followed by a review of how they responded and how they could have recognized the activity. The goal is for the team to understand the potential impact a breach could have to the business. Deliverables include a results report and certificates of completion for employees and to the employer.

### Level 3: Information Security Program (CSO Agreement)

This customized program integrates security into the entire organization and can incorporate any of the services in the Identify, Defend and Respond categories shown here. Based on a business risk approach, the goal of this program is to establish, implement, operate, monitor, review, maintain and improve the security in your organization. This program includes the services of a Chief Information Security Officer. It begins with an assessment of risks and provides training and awareness classes and testing. Deliverables include certificates of completion and a plaque for the employer after completion of the first year activities.

## INFORMATION SECURITY SERVICES

### Identify

- Phishing Exercises
- Risk Assessments
- Penetration Testing
- Vulnerability Assessments
- Application Fuzzing
- Data Loss Prevention Threat Assessments
- Wireless Threat Assessments
- Security Benchmark And Reporting

### Defend
